

2012 Mitsubishi i-MiEV BEV Accelerated Testing - September 2014

Two model year 2012 Mitsubishi i-MiEV battery electric vehicles (BEVs) entered Accelerated Testing during April 2013 in a fleet in Arizona. Each i-MiEV will be operated for 60,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby [www](#) pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The two 2012 Mitsubishi i-MiEV BEVs have been driven a total of 23,347 miles. The cumulative average electricity consumption is 255.6 AC Wh/mile. Monthly electricity consumption for each vehicle is captured in the vehicle specific fact sheet on the AVTA web site. Note that initial mileage accumulation was slow due to baseline performance and battery testing.
